The *Immunization Coverage Report, State of Utah: 2021*, supports the mission and goal of state and local immunization programs which is: "... to improve the health of Utah citizens through vaccination to reduce illness, disability, and death from vaccine-preventable infections."

This annual *Immunization Coverage Report* provides an overview of immunization information about Utah residents, organized by immunization coverage status for Utah children, adolescents, and adults. This report presents data obtained from four primary sources: the National Immunization Survey (NIS), the Behavioral Risk Factor Surveillance System (BRFSS), the Utah Statewide Immunization Information System (USIIS), and the APPX web application used for tracking immunization coverage rates from Utah schools, licensed day care facilities, and long-term care facilities. Descriptions of these sources and the methods used in data reporting are described throughout the report. Because of the differences in the collection methodologies of these data sources, care should be taken before consideration of any comparisons.

This report can be a resource for local immunization programs for evaluation of coverage areas, identification of gaps in services, development of immunization intervention strategies, and in consideration of further investigations.

An ongoing focus of immunization coverage is the infant and early childhood population. According to the 2020 National Immunization Survey (NIS), Utah ranked 19 in the nation for the number of two-year-olds who were fully immunized. The NIS reports an estimate of the number of children who have completed the recommended childhood immunization series 4:3:1:4:3:1:4 (4 DTaP, 3 Polio, 1 MMR, 4 Hib, 3 Hepatitis B, 1 Varicella, and 4 Pneumococcal vaccines) by 24 months of age.

Despite improvements in coverage rates in recent years, there is still work to be done to achieve the *Healthy People 2030* objective to increase the proportion of people who receive recommended immunizations. The focus of the Utah Department of Health Immunization Program continues to be those areas where immunization efforts can be concentrated to affect significant improvements.

Continued efforts to increase childhood immunization levels include a variety of interventions, such as, steps to ensure healthcare providers have current information on immunization best practices and enrollment of diverse providers in USIIS. The Utah Immunization Program (UIP) maintains collaborations with school nursing staff, the Utah State Board of Education, child care licensing offices and local health districts. These combined efforts will help ensure Utah children are protected from vaccine-preventable diseases now and in the future.

We value your opinion and welcome your feedback about this report.

The 29 counties in Utah are divided between 13 local health districts (LHDs) which are used in this report as the geographic boundaries of reporting service areas (see map of Utah below). Statewide and national information is presented for comparison.

Although limited comments may follow a specific graph or chart, more details may be found in the References Section on page 167. Explanatory footnotes are provided on some pages and are intended to supply information pertaining to data sources and limitations on data interpretation.

Utah map displaying the 13 LHDs (bold) and 29 counties (light text)

Early Childhood Immunization

The Advisory Committee on Immunization Practices (ACIP) and the Centers for Disease Control and Prevention (CDC), establish standards of comparison for immunization status. Up-to-date (UTD) at age two is the percentage of children 24 months of age who have received all doses of recommended vaccines. This standard is used across the U.S. by state immunization programs and provider sites to evaluate their effectiveness in the protection of children from vaccine-preventable diseases.

Child and Adult Immunization

Exposure to groups of people of any age increases the risks for to contract and transmit infectious diseases. More than two-thirds of children younger than six years and nearly all children older than six spend significant time in child care and school settings outside the home. The Utah Immunization Rule for Students (R396-100) became effective in 1975 to implement consistent requirements to protect children attending school.

School Entry (Kindergarten & 7th Grade) & Two Doses of MMR (K–12)

Required kindergarten school entry immunizations include: DTaP, Polio, MMR, Hepatitis B, Hepatitis A, and Varicella vaccines.

Required 7th grade school entry immunizations include: Hepatitis B, Varicella, Tdap, and Meningococcal.

Influenza and Pneumococcal

The incidence of childhood vaccine-preventable diseases has declined dramatically, but similar successes among adults have not been achieved. Adults still suffer the vast majority of certain vaccine-preventable diseases in the U.S.

The 2020 Behavioral Risk Factor Surveillance System (BRFSS) survey results on influenza and pneumococcal immunization data are included in this report. These data, by means of a number of different analyses, provide a summary of coverage of influenza and pneumococcal vaccinations for adults 18 years of age and older.

Appendix B includes 2020 immunization information for residents of long-term care and assisted living facilities. This data is collected by the Utah Department of Health Immunization Program through the APPX Web Application.

National Immunization Survey (NIS), -Child, -Teen, -Flu

The NIS is sponsored by the National Center for Immunizations and Respiratory Diseases (NCIRD) and conducted jointly by NCIRD and the National Center for Health Statistics (NCHS) at the CDC. The NIS is a random-digit-dialing telephone survey of parents followed by a mailed survey to children’s immunization providers. The survey requests immunization information from the providers. The results are tabulated and presented by the CDC. The NIS assesses vaccination levels of young children (age 19-35 months), teens (age 13-17 years) and, for flu only, children (ages 6-18 months and 3-12 years). Further descriptions of the NIS surveys can be found here: <https://www.cdc.gov/vaccines/imz-managers/nis/about.html>.

Behavioral Risk Factor Surveillance System (BRFSS)

The Utah BRFSS is an ongoing information collection effort by the Utah Department of Health in conjunction with the CDC to assess the prevalence of and trends in health-related behaviors in the non-institutionalized Utah adult population ages 18 years and older. The BRFSS survey is conducted by Utah Department of Health (UDOH) employees who contact Utahns by landline and cell phones and use a scripted questionnaire to conduct interviews and collect responses. The CDC then aggregates annual results. In 2020, 2,498 interviews were conducted by landline phones and 8,650 interviews were conducted by cell phones. The response rate (complete and partially completed interviews divided by completed, partially completed, and refused/break-off interviews) was 55.4%.

APPX Web Application

The APPX Immunization component is a web application used to track immunization coverage rates for Utah schools, Head Start programs, licensed daycare facilities, and long-term care facilities. The Utah Department of Health Immunization Program staff access the application to track data and run reports required by state rules. Users at these institutions access APPX the web application to enter immunization data for their facilities yearly.

Utah Statewide Immunization Information System (USIIS)

Established in 1998, USIIS collects, consolidates, and manages immunization records for Utah residents of all ages. The primary sources of USIIS data are healthcare providers, which includes public clinics, private clinics and practices, hospitals, and pharmacies (see table on the next page). Additionally, USIIS contains birth certificate data from the UDOH Office of Vital Records and Statistics. Participation in USIIS is voluntary; not all immunization providers participate. However, participation is required for all Vaccines for Children (VFC) providers. See page 135 for more details about the VFC program.

For the 2021 Immunization Coverage Report, USIIS person data were grouped into 13 local health district service areas by their most up-to-date ZIP code and county information. Coverage results reflect 2020–2021 data submitted to USIIS as of July 1, 2021. Child coverage results include approximately 90% of Utah children—persons 18 years of age and younger with at least one immunization. Adult coverage results include approximately 70-90% of Utah adults—persons age 19 and older with at least one immunization. Although USIIS data provides helpful vaccination estimates, it is not a comprehensive archive of all vaccinations in the state and should be interpreted with caution.

Count of Enrolled USIIS Provider Facilities, 2020 & 2021		
	2020	2021
Charter Schools	132	134
District Schools	715	720
Private Schools	64	68
School Districts	44	44
Daycare Facilities	254	253
Early Childhood Programs	44	46
Head Start Centers	31	31
EHR Vendor or Interface Vendor	49	55
Federally-Qualified Health Center (FQHC)/Rural Health Center (RHC)/Community Health Center (CHC)	63	66
Health Maintenance Organizations	2	3
Hospitals	55	59
Indian Health Centers	20	20
Local Health Departments	48	54
Long-Term Care/Nursing Home	100	140
Pharmacies	524	540
Private Providers	737	824
Vital Records	1	1
Women, Infants, and Children (WIC) Program	1	2
Other Public Providers	67	88
Total	2951	3148

Acronyms and Abbreviations

ACIP—Advisory Committee on Immunization Practices
 AFIX—Assessment, Feedback, Incentive and eXchange (UIP Quality Improvement Activities)
 APPX—APPX web application is used to track immunization coverage rates at Utah schools and care facilities
 BRFS—Behavioral Risk Factor Surveillance System
 CDC—Centers for Disease Control and Prevention
 CHC—Community Health Center
 DTaP—Diphtheria, Tetanus Toxoids, and Acellular Pertussis
 FQHC—Federally-Qualified Health Center
 Hep A—Hepatitis A
 Hep B—Hepatitis B
 Hib—Haemophilus influenza Type B
 HPV—Human Papillomavirus
 IIS—Immunization Information System
 IQIP—Immunization Quality Improvement Program
 LHD—Local Health District
 MenACWY—Meningococcal Conjugate Vaccine
 MenB—Meningococcal B Vaccine
 MMR—Measles, Mumps, Rubella
 NIS—National Immunization Survey
 PCV—Pneumococcal Conjugate Vaccine
 PPSV—Pneumococcal Polysaccharide Vaccine
 RHC—Rural Health Center
 Tdap—Tetanus, Diphtheria, and Pertussis
 UDOH—Utah Department of Health
 UIP—Utah Immunization Program
 USIIS—Utah Statewide Immunization Information System
 UTD—Up to Date
 VFC—Vaccines for Children Program
 WIC—Women, Infant, and Children Program

Combined series definitions

4:3:1 = 4 DTaP, 3 Polio, 1 MMR
 4:3:1:3 = 4 DTaP, 3 Polio, 1 MMR, 3 Hib
 4:3:1:4 = 4 DTaP, 3 Polio, 1 MMR, 4 PCV
 4:3:1:3:3 = 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 Hep B
 4:3:1:0:3:1 = 4 DTaP, 3 Polio, 1 MMR, 0 Hib, 3 Hep B, 1 Varicella
 4:3:1:3:3:1 = 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 Hep B, 1 Varicella
 4:3:1:4:3:1 = 4 DTaP, 3 Polio, 1 MMR, 4 Hib, 3 HepB, 1 Varicella
 4:3:1:0:3:1:4 = 4 DTaP, 3 Polio, 1 MMR, 0 Hib, 3 HepB, 1 Varicella
 4:3:1:3:3:1:4 = same as 4:3:1:3:3:1, adding 4 PCV

The National Immunization Survey (NIS)-Child Survey was first launched in 1994. The target population for the NIS-Child is children who are or will be 19–35 months within a few weeks of being selected to participate in the survey and who live in the U.S. The NIS is a random-digit-dialed survey of parents or guardians and includes data for more than 15,000 children annually. The telephone survey is followed by a questionnaire mailed to vaccination providers to obtain the child’s vaccination history. Data are used to monitor vaccination coverage among 2-year-old children at the national, state, selected local levels, and some U.S. territories.

NIS-Child measures were previously reported as an estimate of vaccine coverage for children age 19–35 months in each survey year. Beginning with data reported in 2019 for survey years 2016–2018, NIS-Child data is now reported for children age 24 months per birth year (e.g., 24-month-old children born in 2018 had data collected in the 2020 survey year). Due to this change, NIS-Child data reported here is not directly comparable to similar data in previous Immunization Coverage Reports produced by the UDOH.

Estimated Vaccination Coverage Among Children Age 24 Months, by Birth Year

	Utah				U.S.				National Rank
	2017		2018		2017		2018		Birth Year 2018, Utah
	%	CI%	%	CI%	%	CI%	%	CI%	
≥3 DTaP	94.3	(89.1 to 97.5)	94.2	(89.1 to 97.5)	92.6	(91.8 to 93.5)	94.8	(94.0 to 95.5)	29
≥4 DTaP	85.5	(78.5 to 91.2)	84.1	(75.4 to 91.1)	80.9	(79.7 to 82.1)	82.3	(80.9 to 83.8)	17
≥3 Polio	94.1	(89.0 to 97.3)	94.2	(89.1 to 97.5)	91.5	(90.6 to 92.4)	93.9	(93.0 to 94.7)	25

Hib-Primary Series	93.9	(88.8 to 97.2)	94.5	(89.4 to 97.7)	92.0	(91.1 to 92.9)	93.8	(92.9 to 94.7)	23
Hib-Full Series [†]	83.9	(77.2 to 89.6)	83.2	(74.4 to 90.4)	79.1	(77.8 to 80.5)	81.4	(79.8 to 82.8)	25
≥3 Hep B	95.9	(92.6 to 98.0)	92.8	(86.4 to 96.9)	91.1	(90.2 to 92.0)	92.7	(91.7 to 93.6)	25
≥1 Varicella	93.0	(87.7 to 96.6)	89.6	(80.7 to 95.5)	89.9	(88.9 to 90.9)	91.9	(90.9 to 92.9)	39
≥3 PCV	93.9	(88.7 to 97.2)	94.2	(89.1 to 97.5)	91.3	(90.3 to 92.1)	93.6	(92.8 to 94.4)	23
≥4 PCV	82.5	(75.4 to 88.5)	84.9	(76.0 to 91.8)	80.9	(79.6 to 82.2)	83.8	(82.4 to 85.1)	20
≥2 Hep A	50.2	(41.4 to 59.7)	49.9	(38.4 to 62.6)	45.5	(44.1 to 47.2)	46.7	(44.8 to 48.7)	21
≥2 Influenza ^{††}	57.1	(48.5 to 66.2)	72.9	(62.5 to 82.4)	58.2	(56.7 to 59.7)	63.0	(61.1 to 64.8)	14
4:3:1:3:3:1:4 ^{§§}	77.1	(69.8 to 83.7)	74.6	(64.2 to 83.9)	69.8	(68.4 to 71.3)	71.3	(69.5 to 73.0)	19

[†] 3 or 4 doses of *Haemophilus influenzae* type b conjugate vaccine, depending on vaccine type.

^{††} Doses must be at least 24 days apart (four weeks with a four-day grace period).

^{§§} 4+ DTaP, 3+ polio, 1+ MMR, 3 or 4 doses Hib, depending on vaccine type, 3+ Hep B, 1+ varicella, and 4+ PCV.

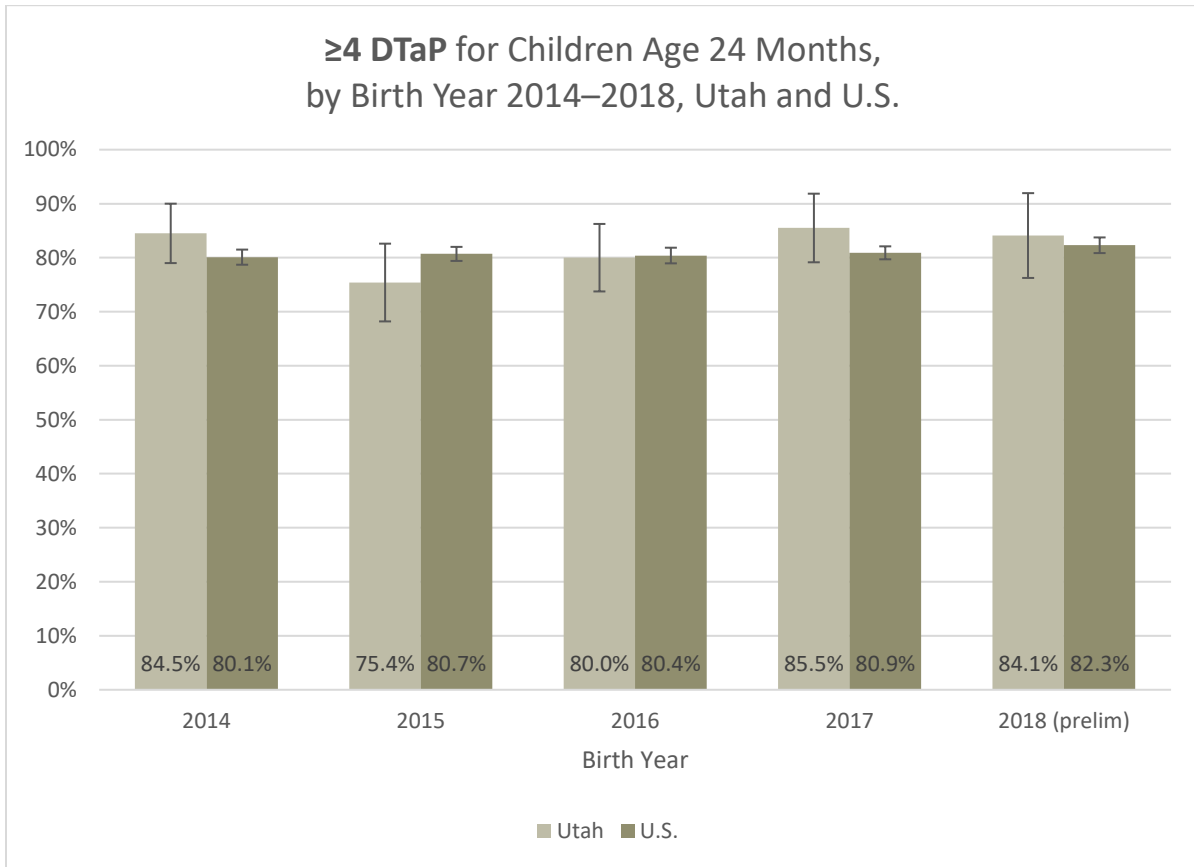

Estimated Vaccination Coverage Among Children Age 24 Months

Comparing Estimates from NIS Child Survey and USIIS Database

	Utah, NIS Survey, Birth year 2018		Utah, USIIS Data
	%	CI %	Birth year 2018 (%)
≥4 DTaP	84.1	(75.4 to 91.1)	77.3
≥3 Polio	94.2	(89.1 to 97.5)	91.0
≥1 MMR	91.3	(83.5 to 96.3)	87.4
≥3 Hib	94.2	(89.1 to 97.5)	90.0
≥3 Hep B	92.8	(86.4 to 96.9)	90.3
Hep B birth dose [§]	75.8	(64.8 to 84.3)	86.1
≥1 Varicella	89.6	(80.7 to 95.5)	86.3
≥4 PCV	84.9	(76.0 to 91.8)	78.8
≥2 Hep A	49.9	(38.4 to 62.6)	61.4
4:3:1:3:3:1:4§§	74.6	(64.2 to 83.9)	72.0

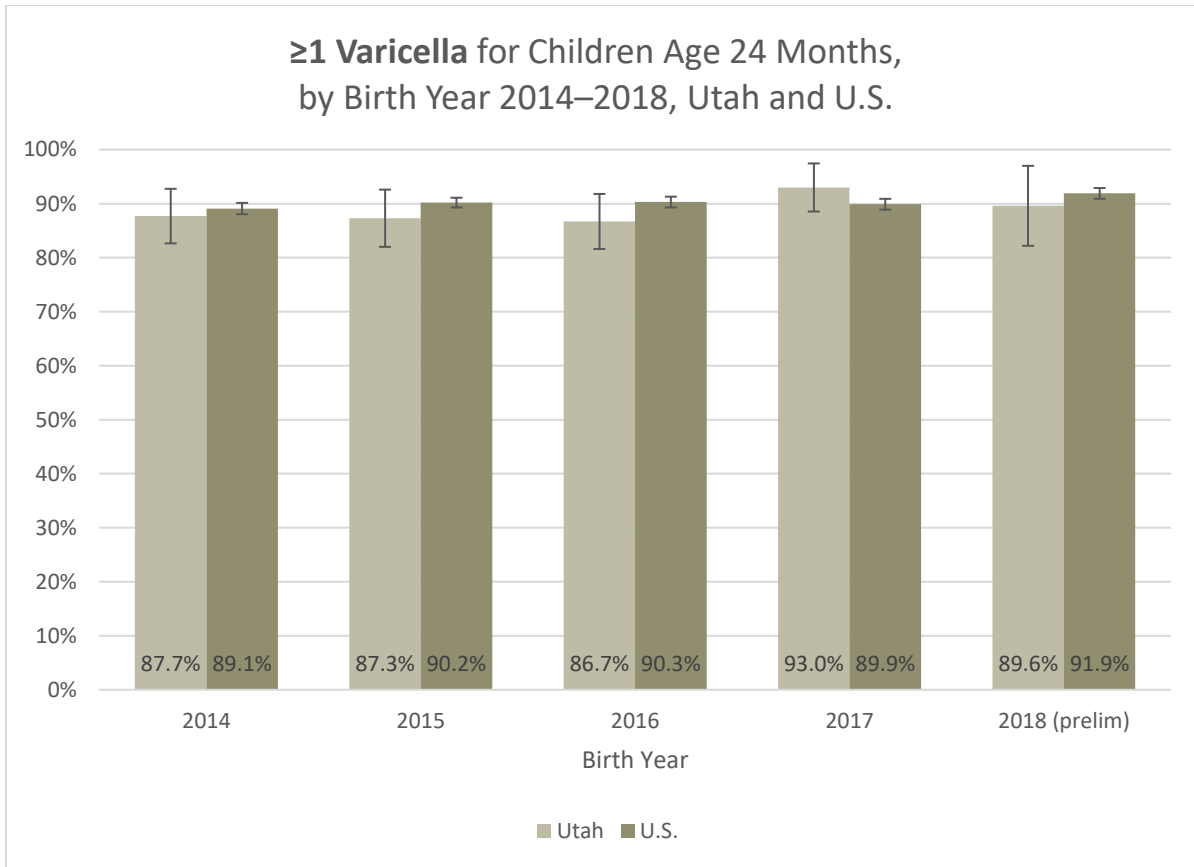

[§] One dose Hep B administered from birth through age 3 days.

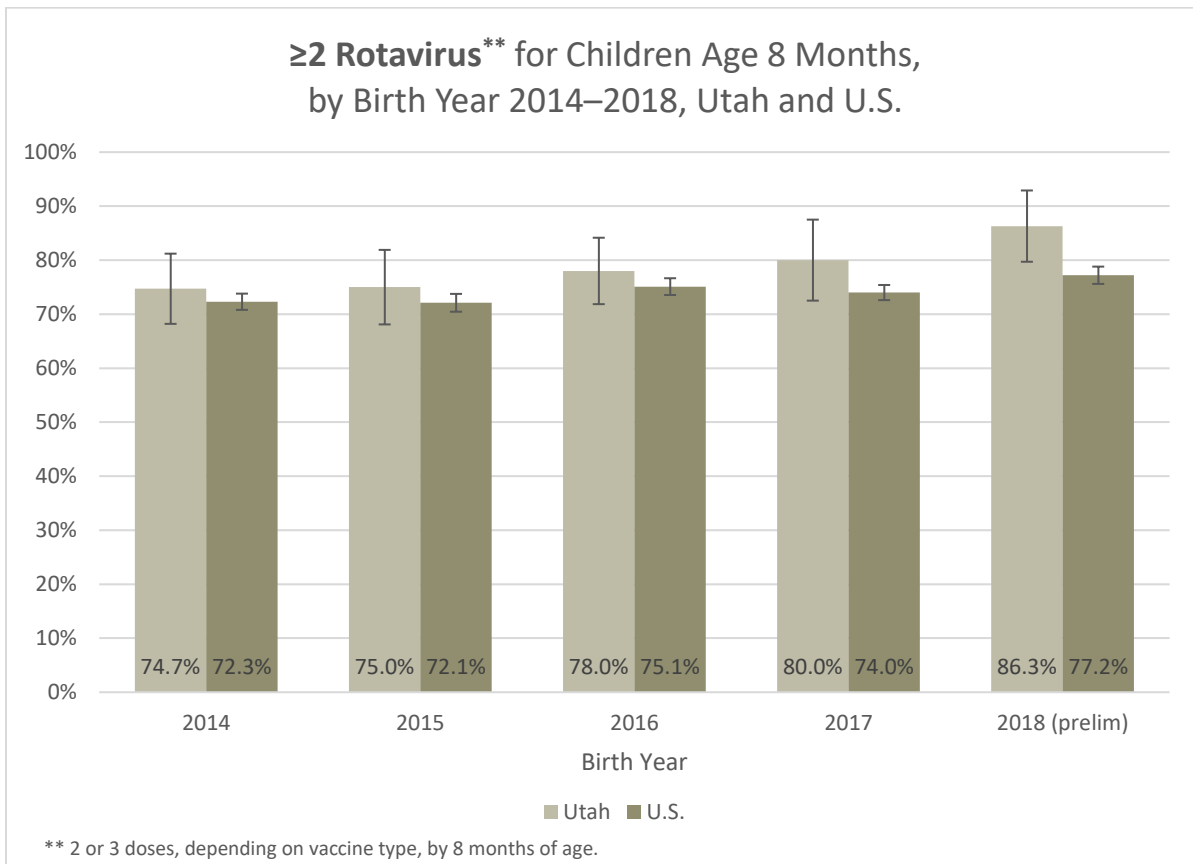

^{§§} 4+ DTaP, 3+ polio, 1+ MMR, 3 or 4 doses Hib, depending on vaccine type, 3+ Hep B, 1+ varicella, and 4+ PCV.

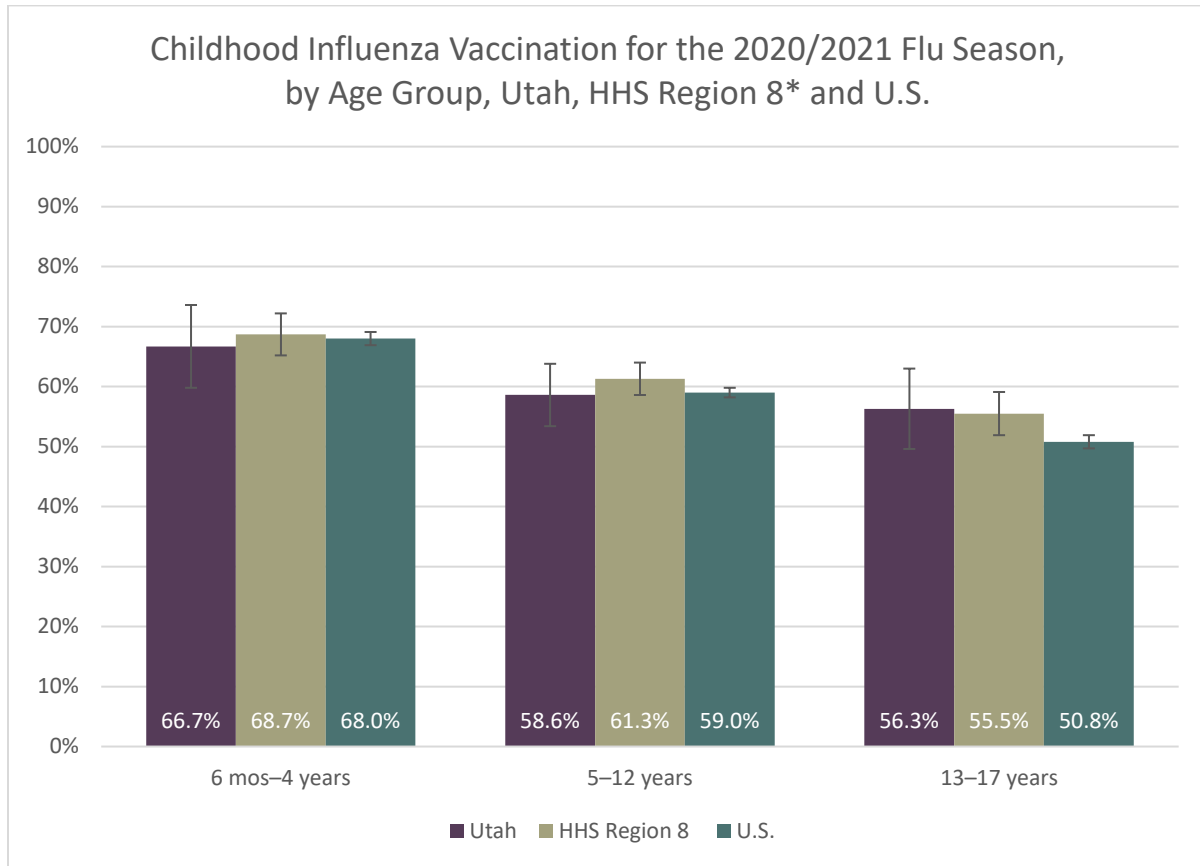

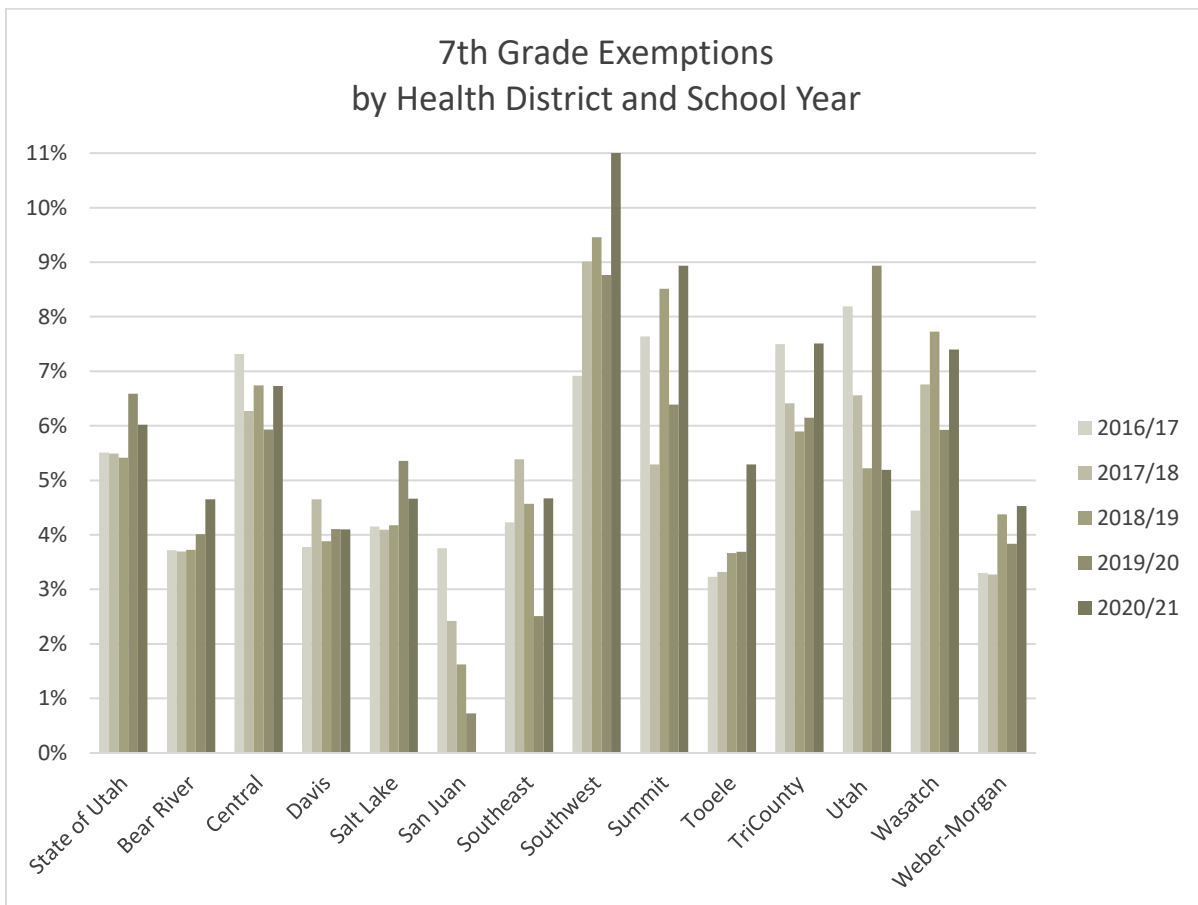

The NIS-Flu combines the flu vaccination responses collected from NIS (children 19–35 months), NIS-Teen (adolescents 13–17 years), and NIS-CIM (children 6–18 months and 3–12 years). NIS-Flu data are used to assess annual flu vaccination coverage among children 6 months–17 years at the national level, state level, and selected local levels, and some in U.S. territories. These NIS-Flu estimates are based on the parent or guardian-reported data.

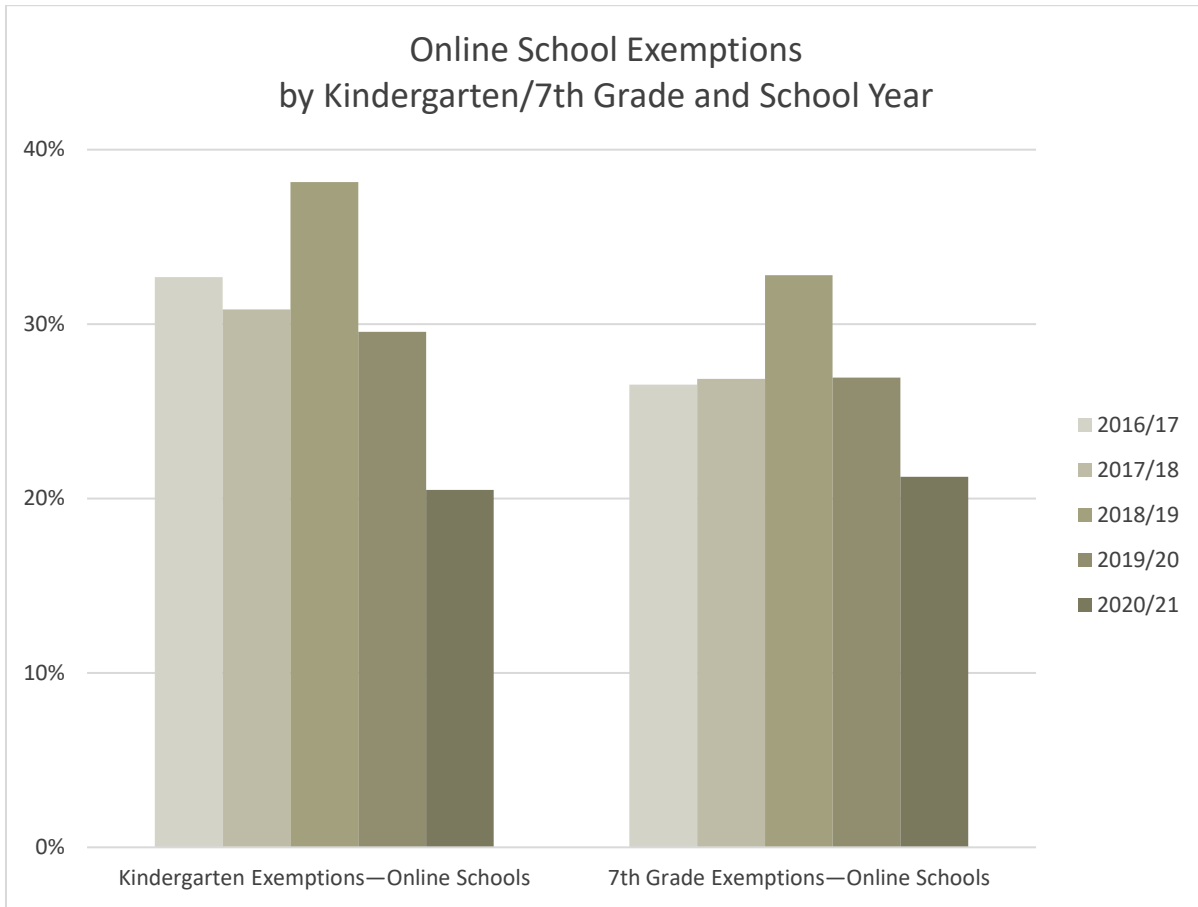

* HHS Region 8 consists of Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming

Immunization Status by School Type, 2020/21 School Year		
Facility Type	Adequately Immunized (%)	Total Exemptions (%)
Child Care Facilities and Preschools	90.4	4.4
Head Start Centers	92.6	2.6
Kindergarten School Entry	89.1	5.1
District Schools	90.2	3.6
Charter Schools	88.6	8.0
Private Schools	92.2	4.2
Online Schools	70.4	20.5
7th Grade School Entry	85.4	6.0
District Schools	86.5	4.7
Charter Schools	83.1	11.1
Private Schools	86.2	6.5
Online Schools	68.3	21.2
Second-dose MMR (K-12)	95.2	4.2
District Schools	96.2	3.3
Charter Schools	92.5	7.0
Private Schools	94.7	3.5
Online Schools	83.2	14.6

Since 2007, the CDC has published annual NIS data for teen populations. This survey is similar to the childhood NIS. Survey responses are collected via telephone through random-digit dialing. Participants were asked to provide healthcare provider information so their verbal responses over the phone could be validated through the official immunization record. Children age 13–17 years were included in the study. Participants were asked about receiving meningococcal conjugate (MenACWY), MMR, Hepatitis B, Varicella, Tdap, and HPV vaccines. The CDC identified three limitations to this survey: 1) there could be bias due to non-response and households without landline telephones; 2) underestimation of vaccine coverage may have occurred due to the exclusive use of provider-verified records; and, 3) some state level and race/ethnicity level data should be interpreted with caution because of small sample sizes. Results from this survey have been reported on national and state levels, which can be seen in the tables below.

Estimated Vaccination Coverage Among Age 13–17, 2017–2020						
	≥1 dose Varicella		≥1 dose Tdap		≥1 dose MenACWY	
	Utah %	U.S. %	Utah %	U.S. %	Utah %	U.S. %
2017	94.4±2.9	95.5±0.7	91.6±3.3	88.7±0.9	85.1±4.3	85.1±0.9
2018	95.8±2.9	94.9±0.6	89.9±4.4	88.9±0.8	85.2±5.0	86.6±0.9
2019	94.1±3.2	95.2±0.8	86.8±5.2	90.2±1.0	86.6±5.0	88.9±0.9
2020	92.8±3.9	95.6±0.6	91.3±3.9	90.1±0.9	90.3±4.1	89.3±0.9

Estimated Vaccination Coverage Among Age 13–17, 2019–2020					
Year	Sex	≥1 dose HPV		HPV UTD*	
		Utah %	U.S. %	Utah %	U.S. %
2019	Females	75.0±9.0	73.2±1.9	48.8±10.2	56.8±2.2
	Males	63.0±10.0	69.8±1.9	41.4±10.0	51.8±2.1
	Females and Males	68.8±6.8	71.5±1.3	44.6±7.2	54.2±1.5
2020	Females	71.7±8.9	77.1±1.7	49.8±10.1	61.4±1.9
	Males	65.6±9.6	73.1±1.7	40.5±9.35	56.0±1.9
	Females and Males	68.6±6.6	75.1±1.2	45.0±7.0	58.6±1.3

* HPV UTD - Includes those with ≥3 doses, and those with 2 doses when the first HPV vaccine dose was initiated at age <15 years, and there was at least 5 months minus 4 days between the first and second dose.

Estimated Vaccination Coverage Among Age 13–15, 2014–2020

Survey Year	1 Tdap		2 VAR		1 Men ACWY	
	Utah %	U.S. %	Utah %	U.S. %	Utah %	U.S. %

The following estimates of adult immunization levels for pneumococcal, influenza, shingles/zoster, and tetanus vaccine are collected via the national Behavioral Risk Factor Surveillance Survey (BRFSS).

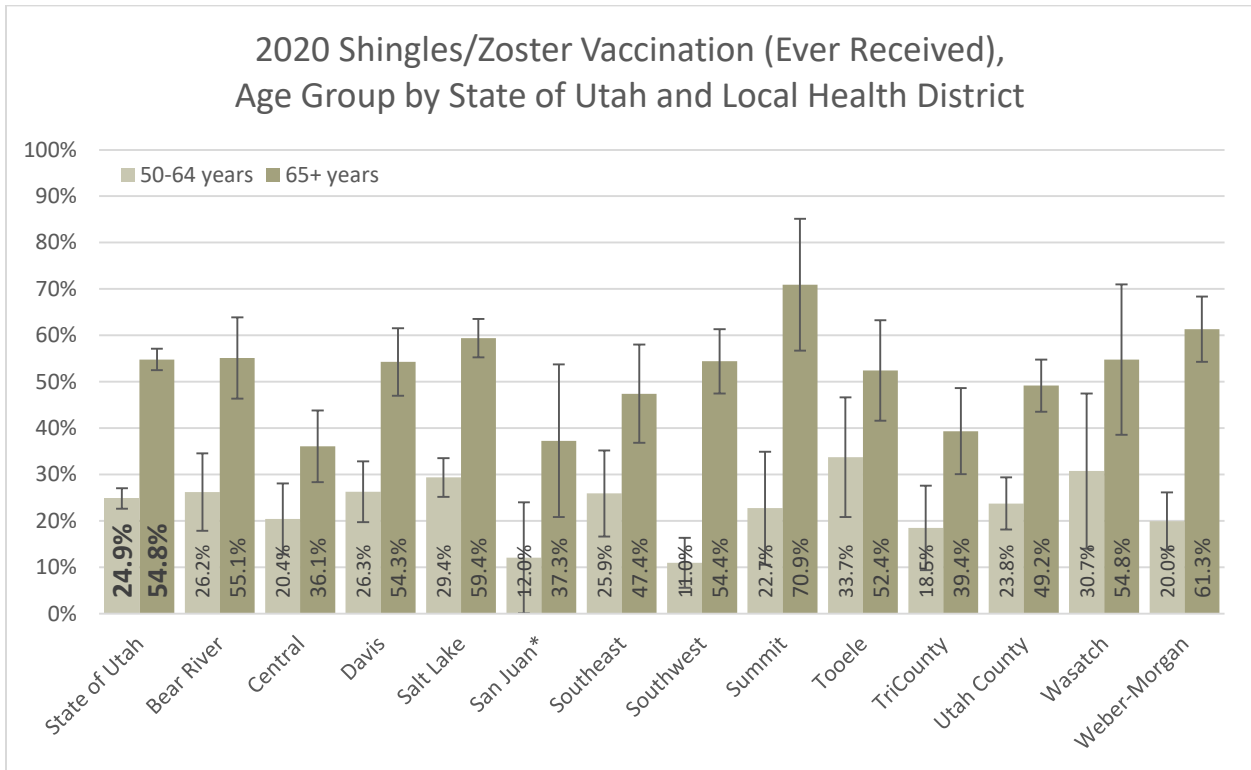

Estimates of adult immunization rates with shingles/zoster vaccine and tetanus vaccine are collected in the BRFSS on a rotating basis every three years. Questions about shingles/zoster vaccination were included in the survey for years 2014, 2017, and 2020. Questions about tetanus vaccination were included in the survey for years 2013, 2016, and 2019. The most recent data for each measure is presented in the graphs below.

Data Source: BRFSS, Utah, 2020, crude rates (Ref 2).

* Use caution in interpretation; the estimate has a coefficient of variation >30% and is deemed unreliable by UDOH standards.

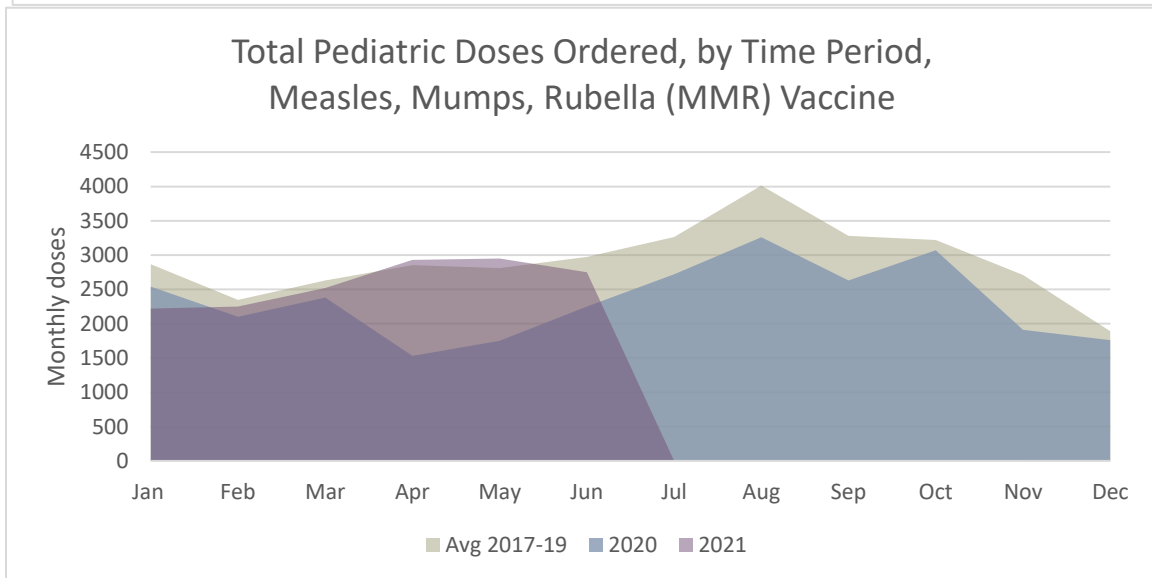

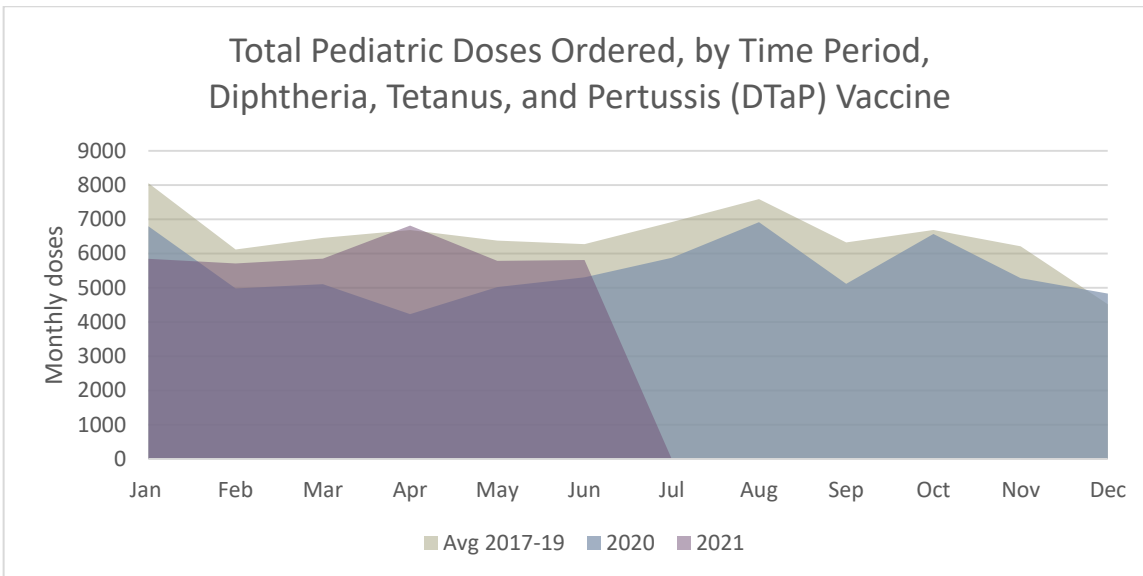

Pandemic Impact on pediatric vaccine orders

Many pediatric vaccines are ordered by the Immunization Program’s Vaccine Management team each month for the children’s health insurance plan (CHIP) and vaccines for children program (VFC). Although these orders represent only a portion of the pediatric vaccines ordered throughout the state (by private providers and others), they are a large and consistent volume and can demonstrate trends in pediatric vaccine uptake among providers and patients in these two large public assistance programs.

The sections below contain graphs showing the monthly order volume, by antigen type, for the average of years 2017–19, the full year 2020, and January to June 2021. The deficit in 2020 vaccine orders as compared to the average from 2017–19 is shown by the tan area of the graphs. The order data contained in these graphs is for vaccines ordered for pediatric use only.

Childhood vaccines

While all monthly order volumes for childhood vaccines ordered in 2020 were less than the average for 2017–2019, some antigen types did not demonstrate as large of a deficit (pneumococcal conjugate, hepatitis B, rotavirus) as others (DTaP, MMR, hepatitis A, varicella).

Teen vaccines

Orders volumes for teen vaccines (Tdap, meningococcal, and HPV) were down in spring 2020 but continued to climb until late summer. There was an increase in vaccines ordered for these antigen groups in October 2020 that exceeded the average 2017-19 volume for that month. This was only observed in teen vaccines and not in childhood vaccines. Order volumes for most months in January to June 2021 were similar to or exceeded monthly volumes for the average of 2017–19.

All pediatric vaccine orders

The graph below combines the order volume for all of the pediatric antigen groups except influenza vaccine. The visible portion of the tan shaded area, which displays the average monthly order volume from 2017–2019, signifies the volume of orders that did not occur in 2020 relative to that previous time period. Order volumes for the spring of 2021 increased to nearly normal order volume by April. However, they did not exceed expected order volumes and therefore did not alleviate any deficit.

The table below compares the monthly order volumes in 2020 to the same months in 2019 for each antigen group. For the full year, 2020 orders amounted to 14% fewer vaccine orders than 2019 across all antigen groups. The deficit ranged from 26% fewer in Hepatitis A vaccine to just 6% fewer for rotavirus vaccine. April 2020 had the greatest deficit with 42% fewer vaccine orders than April 2019. Several months of the year had less than a 12% ordering deficit (January, February, July through October) and December 2020 orders exceeded those of December 2019 orders by 2%, indication of a more normal ordering pattern.

Percentage decreases in monthly pediatric vaccine orders in 2020 compared with 2019													
Vaccine Type	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Full year 2020

Pandemic Impact on pediatric vaccine administrations

To determine what effect the COVID-19 pandemic had on the administration of childhood and teen vaccines, monthly administration record counts for January 2018 to June 2021 were extracted from the Utah Statewide Immunization Information System (USIIS), Utah’s immunization registry, for each of the vaccine series and age groups below. Although USIIS is an excellent source of immunization data in Utah, there is no mandate that all vaccinations given in Utah or to Utah residents be recorded in USIIS. Therefore it is not currently a comprehensive account of all vaccinations in Utah and may not fully describe vaccination volumes throughout the state.

Vaccines administered January 2018 through June 2021

The graphs in this section demonstrate the general trend of 2020 monthly vaccine administrations being less than the monthly administrations in the previous two years for selected pediatric vaccines. This was true of nearly all months except June 2020 where a rebound of vaccinations, in what is otherwise a typically slow month, was observed. Presumably, this was due to catching up vaccines not administered in the spring months of March to May. For most vaccines types, 2021 administrations remained below the levels observed in 2018 and 2019 between January and June. This may indicate ongoing pandemic-related difficulties in delivery of routine vaccinations to children. Teen vaccine (Tdap, Meningococcal and HPV) administrations for 2021 appear to have returned to pre-pandemic levels.

Childhood vaccines

MMR Vaccine Administration,
Age 1–18 yrs, January 2018–June 2021

Hepatitis A Vaccine Administration,
Age 1–18 yrs, January 2018–June 2021

Varicella Vaccine Administration,
Age 1–18 yrs, January 2018–June 2021

Teen vaccines

State of Utah *Pandemic impact on pediatric vaccine orders and administrations* 2021

The two tables below display the count difference and percentage differences in vaccine administrations in 2020 compared with the previous year.

For the vaccine types and age groups evaluated, there were approximately 160,000 fewer vaccines administrations recorded in USIIS in 2020. This included approximately 20,000 fewer vaccines of each MMR, Varicella, DTaP, and Polio. All months of the year had a deficit in administered vaccines except June. The months with the largest deficit were March–May 2020.

Count difference in 2020 administrations as compared with the same month in 2019

Cell fill colors of pink/red signify negative percentages, green signify positive percentages.

The darkness of the color indicates scale of the difference from 0%.

The vaccine types with the greatest percentage decrease in 2020 were MMR, Varicella, and Hepatitis A. Overall there were approximately 10% fewer pediatric vaccine administrations recorded in USIIS in 2020 than in the previous year for these vaccine types and age groups. The months of March to May 2020 had the largest percentage decrease in vaccines administered.

* Last flu season between 7/1/2020 and 6/30/2021.

** Zoster vaccination only available to adults age 50+. This measure reports only the percentage of adults age 50+ who are vaccinated with the Zoster vaccine.

*** PPSV23 vaccination only recommended for adults age 65+. This measure reports only the percentage of adults age 65+ who are vaccinated with PPSV23.

Data Source: BRFSS, Utah, 2020, crude and age-adjusted rates (Ref 2).

* Use caution in interpretation; the estimate has a coefficient of variation >30% and is deemed unreliable by UDOH standards.

*** PPSV23 vaccination only recommended for adults age 65+. This measure reports only the percentage of adults age 65+ who are vaccinated with PPSV23.

The Immunization Quality Improvement Program (IQIP) is a program designed to provide quality improvement activities for Vaccines for Children (VFC) providers. The purpose of IQIP is to promote and support provider level quality improvement efforts designed to increase on time vaccination of children and adolescents in adherence to the Advisory Committee on Immunization Practices (ACIP) routine immunization schedule.

IQIP Core Strategies

1. Schedule the next visit before the patient leaves the provider office.
2. Leverage the Utah Statewide Immunization Information System's (USIIS) functionality to improve immunization practice.
3. Give a strong vaccine recommendation, specifically for HPV vaccine, if the provider serves adolescents.
4. Strengthen vaccination communications.

IQIP Process

Site Visit (In-Person)

- Discuss provider's vaccination workflow
- Review initial coverage assessments and set coverage goals
- Discuss, select, and practice QI strategies

2-Month Check-In (Phone Call)

- Monitor progress
- Provide technical assistance and motivation
- Update Strategy Implementation Plan

6-Month Check-In (Phone Call)

- Monitor progress
- Provide technical assistance and motivation
- Update Strategy Implementation Plan

12-Month Follow-Up (Phone Call)

- Assess QI progress and provide technical assistance
- Evaluate year-over-year change in coverage levels
- Update Strategy Implementation Plan and encourage continued effort

During the IQIP process, each provider decides on a Strategic Implementation Plan with the IQIP representative. The representative then follows-up at two months, six months, and then re-runs the assessment rates and reviews the progress at 12 months after the initial site visit.

IQIP visits for 2020 began in mid-summer. Unfortunately, because of the challenges of COVID-19, it was not possible to finish the required IQIP visits for 25% of VFC providers. Ten IQIP visits were completed and conducted via online meeting software. In-person initial IQIP visits resumed in July 2021.

Immunization report for long-term care facilities

Long-term care facilities are required to report the influenza and pneumococcal immunization status of patients and the influenza and Hepatitis B immunization status of employees to the Utah Department of Health Immunization Program. Completion of the annual report is necessary to prevent sanctions of a facility’s license.

The report includes persons who are residents or employees of a facility between October 1 and December 31 of the survey year. The survey is completed online no later than January 31 of the following year. Facilities reporting include hospitals (swing beds and transitional care beds), nursing care facilities, small healthcare facilities, and type I and type II assisted living facilities. There were 355 licensed facilities in 2020; six facilities did not report for the year 2020.

The portion of the survey reported here is as follows:

- Influenza (flu) immunizations: given during the reporting time period for residents and employees;
- Pneumococcal immunizations: given at any time for residents only; and
- Hepatitis B immunizations: given at any time to an employee having direct patient contact.

Vaccine Preventable Diseases in Utah, 2020

Trends in vaccine-preventable diseases (VPDs) are tracked with the intent that the data can be helpful in development of collaborative immunization campaign efforts. The following data were provided by the Bureau of Epidemiology, Utah Department of Health, for statewide and local health district VPD counts.

2020 Rates of Vaccine Preventable Disease (per 100,000 people)

	Haemophilus Influenzae Type B	Hepatitis A Virus	Hepatitis B Virus, Acute	Measles	Meningococcal Disease	Mumps

Vaccines for Children Program Report, 2020

The Vaccines for Children (VFC) Program helps provide vaccines to children whose parents or guardians may not be able to afford immunizations. This helps ensure all children have a better chance of getting their recommended vaccinations on schedule. A child is eligible for the VFC Program if they are younger than 19 years of age **and falls into one of the following categories:**

- Medicaid-eligible
- Uninsured
- Underinsured
- American Indian or Alaska native

The CDC estimates vaccination of children born between 1994 and 2013 will¹:

- Prevent 322 million illnesses
- Help avoid 732,000 deaths
- Save nearly \$1.4 trillion in total societal costs

In the 2021 fiscal year, it was estimated that 319,601 children younger than 19 years old were eligible for VFC funded vaccines in Utah.

VFC vaccines can be administered by any enrolled VFC Program Provider. Altogether there are 44,000 providers enrolled in the VFC Program nationwide².

Number of Active VFC Providers Utah, 2021

³ Centers for Disease Control and Prevention (CDC) Vaccine Tracking System (Vtrcks) System. Accessed December 2021.CDC.

Utah K–12 schools report the immunization status of all enrolled students in the APPX web application each year. From these reports, summaries are generated for kindergarten and 7th grade immunization status. The tables below report the percentage of students in kindergarten and 7th grade schools who are adequately immunized, who have an exemption to any school-required vaccine, who are enrolled via conditional enrollment or extended conditional enrollment, or are out of compliance with vaccination requirements.

Kindergarten School Entry Table:

Kindergarten Entry, Adequately Immunized and Total Vaccine Exemptions, 2020–2021 School Year
